

Shrink Wrap Pro™

Need to contain dust and debris when blasting a hull or other object?

Shrink wrap is an ideal material to construct a containment area because it is heat shrunk. This means it moulds to the shape of the object, becoming 'tight as a drum skin' so it cannot flap or chafe, even in high wind speeds. Zipped doors can be attached to provide access. Shrink film is also recyclable.

Shrink Wrap Pro™ uses marine grade shrink wrap with UV inhibitors and anti-brittle agents to wrap objects of any size. This versatile material will only adhere to itself and not the object being wrapped. It is tough and can be easily repaired with patch tape.

Here are some examples of shrink wrap containment areas:

Shrink Wrap Pro™ provides an onsite shrink wrapping service and also supplies shrink film and accessories to companies who wish to start shrink wrapping. Training is also provided.
