

Shrink Wrap Pro™

Bow roof sheds

Need to get your boat or car in a shed for storage or maintenance but don't have a shed or can't afford to hire one?

Shrink Wrap Pro™ supplies and erects bow roof sheds which are covered in shrink film to create an extremely strong workspace. Shrink film is an ideal material for creating a 'drum tight' covering. The shrink film is tough, has UV inhibitors and anti-brittle agents. A fire retardant film is also available.

The shed is constructed from wooden bows and can be placed on a variety of surfaces including grass, concrete and hard core. Access doors, suitable to the use of the shed, are fitted. Vents in the ends and along the top of the shed provides a cross-flow of air to prevent condensation.

The white film reflects sunlight which keeps the shed cool on sunny days but does not make the shed dark inside. It also reflects light within the shed illuminating the whole structure.

Bow roof sheds can be purchased or rented from Shrink Wrap Pro™ .

Steps in erecting a bow roof shed.

Setting up the sills

Erecting the frames

The frames and door fitted

End covered

Film attached as far as the sill

The finished shed shrinkwrapped
